

## Summary of 2008-2009 Citrus Budget for the Southwest Florida Production Region

Ronald P. Muraro, Extension Economist University of Florida, IFAS, CREC, Lake Alfred, FL

Citrus budgets are tabulated annually for the Central, Southwest and Indian River citrus production regions of Florida. The attached budget costs are for the Southwest Florida citrus production region. These costs may not represent your particular grove situation. However, they represent the most current comparative cost estimates for Florida citrus. The budget costs items for the **Southwest Florida** are more representative of an **owner-managed operation**; **not a custom-managed operation**.

Budget analysis provides the basis for many grower decisions. Budgets can be used to calculate potential profits, determine cash requirements and determine break-even prices. The budget costs presented will serve as a format for growers to analyze their own individual records. The cost data were developed by surveying custom operators, suppliers, growers, colleagues with UF/IFAS and County Extension Agents in each production region.

Average cultural production costs decreased 12% between 2007-2008 and 2008-2009 seasons. This was because fuel and energy costs for equipment application decreased 18% for gasoline and 16% for diesel fuel over the 2007-2008 season; and fertilizer prices had the highest decrease of all the inputs averaging 21% less than the 2007-2008 season. However, chemical prices increased 2% above the previous season. The sluggish economies in the United States and internationally resulted in lower demand for fuel-based energy products and agricultural chemicals and fertilizers.

The 2008-2009 summary comparative budget summary for a processed orange cultural program is shown in Table 1. Two scenarios are presented for the budget: 1) Traditional/Historic Cultural Program Without Citrus Canker and Greening and 2) Cultural Program With Citrus Canker and Greening. Scenario one represents costs of traditional grove practices which have been historically performed for citrus grown in Southwest Florida, but does not include citrus canker and greening management control programs. Scenario two is the same cultural program for scenario one but expanded to include the additional costs for managing citrus canker and greening. Each budget scenario shows a Total Cost Per Acre Without and With resetting-tree replacement.

With the introduction of citrus greening in 2005, Florida citrus growers have had to develop new management strategies to identify and remove infected trees along with adding new spray programs to control the insect vector, the Asian citrus psyllid. Likewise, with the end of the citrus canker eradication program in 2006, to reduce the impact of canker infestations on new tree flushes and reduce fruit drop, copper spray material is being added with each spray tank mix. For fruit grown for the fresh fruit market, additional costs are incurred by growers to assure that the blocks and fruit can be certified "canker free" for shipments to the U.S. domestic and European markets. The estimated additional costs required to manage citrus greening and canker were based on the cultural programs being implemented in UF/IFAS CREC research groves and information from citrus growers. These costs were incorporated into Tables 1, 2, 3 and 4.

The budgets shown in Table 1 list the costs of individual grove care practices normally performed in a citrus grove. These costs reflect current grove practices being performed by growers. The estimated costs are for a mature grove (10+ years old); the grove care costs for a specific grove site may differ depending upon the tree age; tree density and the actual grove practices performed. For example, tree losses due to blight, tristeza or citrus greening could increase the tree replacement costs by double or more. Travel and set-up costs may vary due to the size of a citrus grove and the distance from the grove equipment barn. Citrus canker and greening control costs will also vary between individual blocks due to variety and fresh or processed market destination.

The comparative budget costs are shown as an expanded "delivered-in" format in Table 2 and are presented with and without the additional citrus greening cultural management coss as well as no resetting and resetting. The delivered-in costs include cultural/production, management, regulatory and harvesting costs. For processed juice cultural program, the costs are presented in per acre, per box and per pound solids cost units. The per acre yields used in Table 3 represents above average production for Hamlin oranges in the Southwest Florida production region. The decreased yield per acre for the "with greening" expanded budget reflects an additional 2.3% average annual tree loss for all age trees. Table 3 shows the delivered-in costs with resetting.

Traditional citrus psyllid-greening management includes a soil-applied Temik treatment in January. The budgeted spray costs in Table 1 includes the Temik soil treatment along with five additional ground spray applications. In Table 4, the costs of a traditional citrus psyllid management program are compared to an alternative "non-Temik" management program. The alternative citrus psyllid spray program includes seven ground spray applications with an estimated cost savings of \$36.85 per acre over the traditional Temik management program.

Break-even prices for processed Valencia oranges are shown in Table 5 for yields ranging from 300 to 600 boxes per acre. Without the additional cultural management costs for citrus canker and greening and no resetting, the delivered-in break-even price ranged from \$1.180 to \$0.803 per pound solids; with resetting the breakeven prices ranged from \$1.284 to \$0.854 per pound solids. With the additional citrus canker and greening costs and no resetting, the delivered-in break-even prices ranged from \$1.360 to \$0.892 per pound solids; with resetting these breakeven prices ranged from \$1.539 to \$0.982 per pounds solids. The break-even price range for processed Valencia oranges under the Alternative psyllid management program was \$1.340 to \$0.882 per pound solids with no resetting and \$1.485 to \$0.955 per pound solids with resetting.

The three ADDENDA tables provide the detailed information on the herbicide, spray and fertilizer programs used in the comparative budgets.

Additional information on budgeting and cost analysis can be obtained by contacting the author, your County Extension Citrus Agent, or going to the Lake Alfred UF/IFAS CREC **Extension-Economics** website: http://www.crec.ifas.ufl.edu/Extension/Economics.

## Refer to Table 1.

Southwest Florida production area refers to those counties in the Florida Agricultural Statistics Service "Southern Production Area." However, the costs shown are applicable to other South Central Florida counties such as DeSoto and Sarasota counties.

Where **equipment use** or **application** is listed (mowing, spray and herbicide application, etc.), the costs include a charge for equipment repairs, maintenance, labor and overhead management charges/costs. The exception are costs items such as hedging and topping where average custom charges are used. A **management charge** for equipment supervision and fruit marketing is not included. Management charges/costs could be based on a monthly charge (\$3 to \$6/acre) or percentage of gross sales. In addition to these charges, a harvesting supervision cost ( $10\phi$  to  $20\phi$ /box) for overseeing and coordinating harvesting may be charged. Other cost items which are not included in the budget are ad valorem taxes and interest on grove investment. In addition to these cost items, overhead and administrative costs, such as water drainage/district taxes, crop insurance, and other grower assessments, can add up to 12 percent to the total grove care costs. These costs vary from grove to grove depending on age, location, and time of purchase or establishment and are estimated in the expanded Tables 3 and 4.

The budget costs in this report represent an **owner-managed operation** for the production of oranges for processing and grapefruit for the fresh market. Therefore, the **10 percent handling and supervision charge** added to the material cost for a custom-managed operation is **not included** in the costs.

The budget cost items have been revised to reflect current grove practices being used by growers—e.g., chemical mowing, different spray materials, and rates of fertilization, microsprinkler irrigation, more reset trees, hedging and topping practices, etc. Therefore, the revised costs for each grove practice shown may be higher, or lower, than previously reported.

Although the estimated annual per acre grove costs listed are representative for a mature citrus grove (10+ years old), the grove care costs for a specific grove site may differ depending upon the tree age, tree density and the grove practices performed; e.g., spot herbicide for grass/brush regrowth under trees could add an additional \$11.52 per acre; extensive tree loss due to blight, tristeza, or citrus greening could substantially increase the tree replacement and care costs; travel and set-up costs may vary due to size of the citrus grove and distance from grove equipment barn and could add \$36.08 per acre; etc.

<sup>&</sup>quot;Irrigation Expense includes the following:

	Microsprinkler	<u>Drip</u>
Variable Operating Expense (Diesel)*	\$ 78.39	\$ 75.01
Fixed-Variable Expense (annual maintenance repairs to system)	59.04	52.43
Total Cash Expenses**	\$137.43	\$127.44
Fixed-Depreciation Expense	56.56	45.25
Total Cash and Fixed Expense	\$ <u>193.99</u>	\$ <u>172.69</u>

<sup>\*</sup> Adjusted for higher fuel costs.

Source: Ronald P. Muraro, Extension Farm Management Economist, University of Florida, IFAS, CREC, Lake Alfred, FL, September 2009.

<sup>&</sup>lt;sup>x</sup>Per acre costs shown in parenthesis are for 2009.

<sup>\*\*</sup> Where applies, there may be an additional cost of \$14.07 per acre for water control in/out of ditches and canals plus \$17.03 per acre for ditch and canal maintenance plus \$18.08 for weed control in ditches and canals.
