

Gulf CHMA Update – November 2013, Cycle 39

Phil Stansly and Pilar Vanaclocha.

As of the **39th cycle**, the total number of MB surveyed decreased from 5,507 to 5,453 but with 1,878 of these having n/a (i.e. not available – 34% total not surveyed). In the 5 County area, the number of multi-blocks surveyed increased from 815 to 847 but with 350 MB had n/a for their data (41% not surveyed). For comparison, total MBs surveyed in the other CHMAs combined totaled 4,606 MB with 1,525 n/a for 33% not surveyed. The 39th cycle of the statewide survey was completed on 25 October 2013. Hendry counties had ACP increases. Charlotte and Glades had ACP counts stabilizing. Collier and Lee counties had decreases in ACP counts. The map now shows only **Cycles 33 – 39** to better fit the data (Fig. 1). The number of **hotspots** has decreased from **3** to **0** (Fig. 1. and 2.) (i.e. Multi-block ID with ≥ 21 psyllids) for Cycles 37, 38 and 39 (see interactive map on our website for locations of psyllid counts and hotspots).
