

Gulf CHMA Update – March 2014, Cycle 45

Phil Stansly, Pilar Vanaclocha and James Tansey.

As of the **45th cycle**, the total number of MB surveyed decreased from 5,525 to 5,492 but with 320 of these having n/a (i.e. not available – 5.8% total not surveyed). In the 5 County area, the number of multi-blocks surveyed decreased from 880 to 834 but 100 MB had n/a for their data (11.4% not surveyed). For comparison, total MBs surveyed in the other CHMAs combined totaled 4,645 MB with 220 n/a for 4.7% not surveyed. The 45th cycle of the statewide survey was completed on 28 February 2014. Glades, Collier, Lee, Hendry and Charlotte counties had ACP decreases. The map shows only **Cycles 39 – 45** to better fit the data (Fig. 1). The number of **hotspots** was **0** (Fig. 1. and 2.) (i.e. Multi-block ID with ≥ 21 psyllids) for Cycles 43, 44 and 45 (see interactive map on our website for locations of psyllid counts and hotspots).
