

# Gulf CHMA Update – January 2014, Cycle 42

Phil Stansly and Pilar Vanaclocha.

As of the **42<sup>nd</sup> cycle**, the total number of MB surveyed increased from 5,441 to 5,523 but with 792 of these having n/a (i.e. not available – 14% total not surveyed). In the 5 County area, the number of multi-blocks surveyed increased from 819 to 877 but with 202 MB had n/a for their data (23% not surveyed). For comparison, total MBs surveyed in the other CHMAs combined totaled 4,646 MB with 590 n/a for 13% not surveyed. The 42<sup>nd</sup> cycle of the statewide survey was completed on 27 December 2013. Glades county had ACP increases. Lee, Collier, Hendry and Charlotte counties had decreases in ACP counts. The map now shows only **Cycles 36 – 42** to better fit the data (Fig. 1). The number of **hotspots** has increased from **1** to **2** (Fig. 1. and 2.) (i.e. Multi-block ID with  $\geq 21$  psyllids) for Cycles 40, 41 and 42 (see interactive map on our website for locations of psyllid counts and hotspots).
