

# Gulf CHMA Update – January 2014, Cycle 43

Phil Stansly and Pilar Vanaclocha.

As of the **43<sup>rd</sup> cycle**, the total number of MB surveyed decreased from 5,523 to 5,480 but with 675 of these having n/a (i.e. not available – 12% total not surveyed). In the 5 County area, the number of multi-blocks surveyed decreased from 877 to 840 but with 141 MB had n/a for their data (17% not surveyed). For comparison, total MBs surveyed in the other CHMAs combined totaled 4,640 MB with 534 n/a for 11% not surveyed. The 43<sup>rd</sup> cycle of the statewide survey was completed on 17 January 2014. Glades county had ACP decreases. Lee, Collier, Hendry and Charlotte counties kept in ACP counts. The map now shows only **Cycles 37 – 43** to better fit the data (Fig. 1). The number of **hotspots** has decreased from **2** to **0** (Fig. 1. and 2.) (i.e. Multi-block ID with  $\geq 21$  psyllids) for Cycles 41, 42 and 43 (see interactive map on our website for locations of psyllid counts and hotspots).
