

Gulf CHMA Update – January 2015, Cycle 61

Phil Stansly and James Tansey

The **61st cycle** of the statewide survey was completed 30 January 2015. Since cycle 60, Collier and Glades Counties saw moderate decreases. Hendry and County had very small increases. A large decrease was apparent in Glades County. Figure 1 shows average ACP numbers by county for Cycles 56 - 61. **Only one site had a hotspot (i.e. Multi-block with ≥ 10 psyllids) in all of Cycles 59, 60 and 61** (please see Figure 2 for trends and the Map on our website for precise locations of ACP counts and hotspots). Please note: the threshold for hotspots decreased from an average of 21 to 10 ACP per sample beginning cycle 49.

For the **61st cycle**, the total number of multi-blocks included decreased from 5339 to 5325; 326 (6.1%) of these were not surveyed. In the 5-County area (Charlotte, Glades, Collier, Hendry and Lee Counties), the number of multi-blocks included decreased from 798 to 797; 89 (11.2%) were not surveyed. Multi-blocks included in the other CHMAs totaled 4507 with 237 (5.3%) not surveyed.
