

# Gulf CHMA Update – July 2013, Cycle 32

Phil Stansly, Moneen Jones and Pilar Vanaclocha.

As of the 32<sup>nd</sup> cycle, the total number of MB surveyed decreased from 5439 to 5429 with 541 of these having n/a (i.e. not available – 10% total not surveyed). In the 5 County area, the number of multi-blocks surveyed decreased from 813 to 806 with 163 MB had n/a for their data (20% not surveyed). For comparison, total MBs surveyed in the other CHMAs combined totaled 4,623MB with 378 n/a for 8% not surveyed. The 32<sup>nd</sup> cycle of the statewide survey was completed on 31 May 2013. Charlotte, Lee, and Collier Counties have ACP decreasing, whereas Hendry County stayed the same, and Glades County increased. The map now shows only Cycles 26 – 32 to better fit the data (Fig. 1). The number of hotspots has increased from 8 to 12 (i.e. Multi-block ID with  $\geq 21$  psyllids) for Cycles 30, 31, and 32 (see interactive map on our website for locations of psyllid counts and hotspots).

**Figure 1 - Average ACP per Gulf CHMA Cycle by County**
