

Gulf CHMA Update – December 2013, Cycle 41

Phil Stansly and Pilar Vanaclocha.

As of the **41st cycle**, the total number of MB surveyed decreased from 5,502 to 5,441 but with 727 of these having n/a (i.e. not available – 13% total not surveyed). In the 5 County area, the number of multi-blocks surveyed decreased from 834 to 819 but with 104 MB had n/a for their data (13% not surveyed). For comparison, total MBs surveyed in the other CHMAs combined totaled 4,622 MB with 623 n/a for 14% not surveyed. The 41st cycle of the statewide survey was completed on 12 December 2013. Lee, Glades, Hendry and Charlotte counties had ACP increases. Collier county had ACP counts stabilizing. The map now shows only **Cycles 35 – 41** to better fit the data (Fig. 1). The number of **hotspots** has increased from **0** to **1** (Fig. 1. and 2.) (i.e. Multi-block ID with ≥ 21 psyllids) for Cycles 39, 40 and 41 (see interactive map on our website for locations of psyllid counts and hotspots).
