

# Gulf CHMA Update – November 2013, Cycle 40

Phil Stansly and Pilar Vanaclocha.

As of the **40<sup>th</sup> cycle**, the total number of MB surveyed increased from 5,453 to 5,502 but with 267 of these having n/a (i.e. not available – 4.9% total not surveyed). In the 5 County area, the number of multi-blocks surveyed decreased from 847 to 834 but with 118 MB had n/a for their data (14% not surveyed). For comparison, total MBs surveyed in the other CHMAs combined totaled 4,668 MB with 149 n/a for 3% not surveyed. The 40<sup>th</sup> cycle of the statewide survey was completed on 15 November 2013. Collier, Lee and Charlotte counties had ACP increases. Hendry and Glades counties had decreases in ACP counts. The map now shows only **Cycles 34 – 40** to better fit the data (Fig. 1). The number of **hotspots** still remains on **0** (Fig. 1. and 2.) (i.e. Multi-block ID with  $\geq 21$  psyllids) for Cycles 38, 39 and 40 (see interactive map on our website for locations of psyllid counts and hotspots).
