

# Gulf CHMA Update – September 2013, Cycle 37

Phil Stansly and Pilar Vanaclocha.

As of the **37<sup>th</sup> cycle**, the total number of MB surveyed increased from 5,455 to 5,501 but with 386 of these having n/a (i.e. not available – 7% total not surveyed). In the 5 County area, the number of multi-blocks surveyed increased from 794 to 820 but with 70 MB had n/a for their data (9% not surveyed). For comparison, total MBs surveyed in the other CHMAs combined totaled 4,681 MB with 316 n/a for 7% not surveyed. The 37<sup>th</sup> cycle of the statewide survey was completed on 13 September 2013. Charlotte, Collier, Glades had ACP increases. Lee County had decreases in ACP counts. Hendry County had ACP counts stabilizing. The map now shows only **Cycles 31 – 37** to better fit the data (Fig. 1). The number of **hotspots** has increased from **0** to **6** (Fig. 2.) (i.e. Multi-block ID with  $\geq 21$  psyllids) for Cycles 35, 36, and 37 (see interactive map on our website for locations of psyllid counts and hotspots).
