

Gulf CHMA Update – February 2014, Cycle 44

Phil Stansly and Pilar Vanaclocha.

As of the **44rd cycle**, the total number of MB surveyed increased from 5,480 to 5,525 but with 795 of these having n/a (i.e. not available – 14.5% total not surveyed). In the 5 County area, the number of multi-blocks surveyed increased from 840 to 880 but with 199 MB had n/a for their data (24% not surveyed). For comparison, total MBs surveyed in the other CHMAs combined totaled 4,640 MB with 596 n/a for 13% not surveyed. The 44rd cycle of the statewide survey was completed on 7 February 2014. Glades and Collier counties had ACP increases. Lee, Hendry and Charlotte had ACP decreases. The map now shows only **Cycles 38 – 44** to better fit the data (Fig. 1). The number of **hotspots** was **0** (Fig. 1. and 2.) (i.e. Multi-block ID with ≥ 21 psyllids) for Cycles 42, 43 and 44 (see interactive map on our website for locations of psyllid counts and hotspots).
