

# Gulf CHMA Update – February 2015, Cycle 62

Phil Stansly and James Tansey

The 62<sup>nd</sup> cycle of the statewide survey was completed 20 February 2015. Since cycle 61, ACP populations remained essentially unchanged since the last cycle in Collier, Glades, Hendry, Glades and Lee County. Figure 1 shows average ACP numbers by county for Cycles 57 - 62. **Only one site had a hotspot (i.e. Multi-block with  $\geq 10$  psyllids) in all of Cycles 60, 61 and 62** (please see Figure 2 for trends and the Map on our website for precise locations of ACP counts and hotspots). Please note: the threshold for hotspots decreased from an average of 21 to 10 ACP per sample beginning cycle 49.

For the 62<sup>nd</sup> cycle, the total number of multi-blocks included decreased from 5324 to 5320; 491 (9.2%) of these were not surveyed. In the 5-County area (Charlotte, Glades, Collier, Hendry and Lee Counties), the number of multi-blocks included decreased from 797 to 796; however, 139 (17.5%) were not surveyed. Multi-blocks included in the other CHMAs totaled 4524 with 352 (7.8%) not surveyed.
