\$40.00 PER SAMPLE

Please note that credit card information is not to be sent in the mail or given over the phone. Credit cards will only be accepted in person.

The primary role of the SWFPDC is to determine if the plant dysfunction involves an infectious causal agent, e.g. fungus, bacterium or virus. This is done by associating causal agents with symptomatic plant tissue. The SWFPDC does not routinely test water or soil for plant disease causal agents.

It is the SWFPDC policy that:

- 1) All plant samples should originate within the geographical boundaries of the State of Florida or be accompanied by appropriate USDA/DACS plant importation permits.
- 2) Plant samples must be adequate in the quality and quantity with a completed Plant Diagnostic Form or equivalent information. Obtaining the appropriate sample before submission will save both time and shipping expense. NOTE: SWFPDC staff reserve the right to immediately discard any sample not meeting the submission criteria listed below. Payments will be applied to submission of replacement samples.
- 3) Samples can be submitted to the SWFPDC in the following manners:
Mail or deliver samples directly from the grower (e.g. homeowner, farmer, nursery, etc.) to the SWFPDC.
Samples must be accompanied by payment to ensure timely release of disease determinations and recommendations. Sample charges may vary according to tests needed.
- 4) Samples are processed on a first come, first served basis in most cases.
- 5) Plant disease determinations and associated control options are emailed, faxed, or direct mailed to the person(s) specified on the form. If none are indicated, the submitter &/or person who pays for the sample will receive the results. No recommendations will be sent without complete identification and crop situation.

GENERAL SAMPLE SUBMISSION GUIDELINES

- 1) Submit generous amounts of plant material representing a range of symptoms.
- 2) Do not add water or pack a sample that is wet.
- 3) Keep samples refrigerated after collection until they are submitted. After collecting good samples, do not ruin them by allowing them to bake in the sun or on the back seat of a car prior to submission.
- 4) Do not mix samples in the same submission bag. Moisture from root samples will contribute to the decay of foliage samples if they are mixed together. Plant disease identification procedures do not utilize soil or water. Excess soil can be hand shaken from root systems but leave enough soil to keep roots at field moisture levels.
- 5) Please mark sample packages with "Warning" if sample has thorns or spines.
- 6) All samples must be accompanied with a completed Plant Diagnostic Form. Give complete information on the form and KEEP THE FORM SEPARATE FROM THE SAMPLE. Limit sample information to one (1) sample per form. You are encouraged to include any other pertinent information in addition to that on the form.
- 7) Remember to note recent pesticide history on the Plant Diagnostic Form accompanying the sample (last three weeks).
- 8) Samples arriving from sites in Florida that are 2 days or less mailing time from Immokalee, can be sealed in plastic bags for shipping.
- 9) Samples arriving from distances greater than 2 days mailing time from Immokalee should be packed tightly in a box with dry paper. Do not seal in plastic because the likelihood of sample deterioration during the mailing period. Do not add moisture
- 10) Mail samples early in the week to avoid the weekend layover in the post office.
- 11) For emergency samples, use overnight courier services or US Overnight mail.
- 12) See guidelines for specific types of plant dysfunction on our website (Plant Sample Submission and Diagnoses RFSR007).
