

University of Florida releases citrus greening management guidelines

03/03/2010 1:29:00 PM

A group of University of Florida experts have released what they say is their best thinking on citrus greening management, under current conditions.

The recommendatons are based on scientific evidence and observations under Florida growing conditions, according to the document.

Because knowledge of this bacterial citrus disease, as well as the insect that carries it, is continuing to evolve, they say the document will be updated periodically.

They also recommend that growers who use the document check with their local citrus Extension agent beforehand to ensure they are using the most recent version.
